minivib

Broad Band 10 to 550 hz. Vibrator

T-7000

A small trailer system available in 3 models

The 'minivib' Model T-7000 is an advanced seismic source system designed for high resolution geophysical surveys. The 'minivib' offers a 10 to 550 hz output making it the broadest band source available in its class. The advanced system features include high fidelity and broad band width, low source generated ground pressure, and noise limiting systems. The T-7000 trailer system is available in three different configurations. This includes the T-7000W, the T-7000S, and the T-7000L. The T-7000W is a trailer system with water tanks, which allows the hold-down weight to be varied by adding and removing water. The T-7000S is a trailer which allows for the full P-wave output from the 'minivib'. The T-7000L is a lighter trailer which has a reduced hold-down weight.
